

Developer Report

Acunetix website audit

19 March 2018

WEB APPLICATION SECURITY

Scan of https://192.168.5.244/

Scan details

Scan information		
Start time	17/03/2018, 22:11:55	
Start url	https://192.168.5.244/	
Host	https://192.168.5.244/	
Scan time	246 minutes, 10 seconds	
Profile	Full Scan	

Threat level

Acunetix Threat Level 2

One or more medium-severity type vulnerabilities have been discovered by the scanner. You should investigate each of these vulnerabilities to ensure they will not escalate to more severe problems.

Alerts distribution

Total alerts found	492
1 High	0
Medium	6
① Low	8
1 Informational	478

Error message on page

Severity	Medium
Reported by module	Scripting (Text_Search_File.script)

Description

This page contains an error/warning message that may disclose sensitive information. The message can also contain the location of the file that produced the unhandled exception.

This may be a false positive if the error message is found in documentation pages.

Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Review the source code for this script.

HTML form without CSRF protection

Severity	Medium
Reported by module	Crawler

Description

This alert may be a false positive, manual confirmation is required.

Cross-site request forgery, also known as a one-click attack or session riding and abbreviated as CSRF or XSRF, is a type of malicious exploit of a website whereby unauthorized commands are transmitted from a user that the website trusts.

Acunetix WVS found a HTML form with no apparent CSRF protection implemented. Consult details for more information about the affected HTML form.

Impact

An attacker may force the users of a web application to execute actions of the attacker"s choosing. A successful CSRF exploit can compromise end user data and operation in case of normal user. If the targeted end user is the administrator account, this can compromise the entire web application.

Recommendation

Check if this form requires CSRF protection and implement CSRF countermeasures if necessary.

Password field submitted using GET method

Severity	Medium
Reported by module	Crawler

Description

This page contains a form with a password field. This form submits user data using the GET method, therefore the contents of the password field will appear in the URL. Sensitive information should not be passed via the URL. URLs could be logged or leaked via the Referer header.

Impact

Possible sensitive information disclosure.

Recommendation

The password field should be submitted through POST instead of GET.

File upload

Severity	Low
Reported by module	Crawler

Description

This page allows visitors to upload files to the server. Various web applications allow users to upload files (such as pictures, images, sounds, ...). Uploaded files may pose a significant risk if not handled correctly. A remote attacker could send a multipart/form-data POST request with a specially-crafted filename or mime type and execute arbitrary code.

Impact

If the uploaded files are not safely checked an attacker may upload malicious files.

Recommendation

Restrict file types accepted for upload: check the file extension and only allow certain files to be uploaded. Use a whitelist approach instead of a blacklist. Check for double extensions such as .php.png. Check for files without a filename like .htaccess (on ASP.NET, check for configuration files like web.config). Change the permissions on the upload folder so the files within it are not executable. If possible, rename the files that are uploaded.

Insecure transition from HTTPS to HTTP in form post

Severity	Low
Reported by module	Crawler

Description

This secure (https) page contains a form that is posting to an insecure (http) page. This could confuse users who may think their data is encrypted when in fact it's not.

Impact

Possible information disclosure.

Recommendation

The form target should point to a secure (https) page.

Login page password-guessing attack

Severity	Low
Reported by module	Scripting (Html_Authentication_Audit.script)

Description

A common threat web developers face is a password-guessing attack known as a brute force attack. A brute-force attack is an attempt to discover a password by systematically trying every possible combination of letters, numbers, and symbols until you discover the one correct combination that works.

This login page doesn't have any protection against password-guessing attacks (brute force attacks). It's recommended to implement some type of account lockout after a defined number of incorrect password attempts. Consult Web references for more information about fixing this problem.

Impact

An attacker may attempt to discover a weak password by systematically trying every possible combination of letters, numbers, and symbols until it discovers the one correct combination that works.

Recommendation

It's recommended to implement some type of account lockout after a defined number of incorrect password attempts.

Possible sensitive directories

Severity	Low
Reported by module	Scripting (Possible_Sensitive_Directories.script)

Description

A possible sensitive directory has been found. This directory is not directly linked from the website. This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

Impact

This directory may expose sensitive information that could help a malicious user to prepare more advanced attacks.

Recommendation

Restrict access to this directory or remove it from the website.

Content type is not specified

Severity	Informational
Reported by module	Crawler

Description

This page does not set a Content-Type header value. This value informs the browser what kind of data to expect. If this header is missing, the browser may incorrectly handle the data. This could lead to security problems.

Impact

None

Recommendation

Set a Content-Type header value for this page.

Affected items

/manual/style/build.properties

Details

HTTP/1.1 200 OK

Date: Sat, 17 Mar 2018 16:58:21 GMT

Server: Apache

Last-Modified: Fri, 16 Mar 2012 20:02:21 GMT

ETag: "18a-4bb61afb5ed40"

Accept-Ranges: bytes

Content-Length: 394

X-FRAME-OPTIONS: SAMEORIGIN

Keep-Alive: timeout=5, max=32

Connection: Keep-Alive

Possible internal IP address disclosure

Severity	Informational
Reported by module	Scripting (Text_Search_Dir.script)

Description

A string matching an internal IPv4 address was found on this page. This may disclose information about the IP addressing scheme of the internal network. This information can be used to conduct further attacks.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent this information from being displayed to the user.

Possible server path disclosure (Unix)

Severity	Informational
Reported by module	Scripting (Text_Search_File.script)

Description

One or more fully qualified path names were found on this page. From this information the attacker may learn the file system structure from the web server. This information can be used to conduct further attacks.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent this information from being displayed to the user.

References

Full Path Disclosure (https://www.owasp.org/index.php/Full_Path_Disclosure)

Possible username or password disclosure

Severity	Informational
Reported by module	Scripting (Text_Search_File.script)

Description

A username and/or password was found in this file. This information could be sensitive.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Remove this file from your website or change its permissions to remove access.

Affected items
